The survey was executed in accordance with the specifications set forth in the Manual of Surveying Instructions, 1973, and the Special Instructions for Group No. 965, Utah, dated April 28, 2003.

Preliminary to the resurvey, the lines of prior surveys were retraced and a diligent search was made for any evidence of the original corners and other calls of record. Identified corners were remonumented in their original positions. Lost corners were reestablished and remonumented at proportionate positions based on the official record. The retracement data were thoroughly verified and only the true line field notes are given herein.

The direction of lines refer to the true meridian and were determined by Global Positioning System (GPS) observations in real time kinematic relative positioning mode.

The geographic positions, in NAD83(CORS96), epoch 2002.0000, for the corners below, were determined by GPS observations to a Network Accuracy of less than 0.10 meters, 95 percent confidence circle, as defined in the
